

MNCs Agentic AI / GenAI role se kya EXPECT kar rahi hain

Sirf LangChain / LangGraph naam sun ke nahi
balki end-to-end AI system build + deploy + explain kar sako

1 Core Expectation (MOST IMPORTANT)

 They expect you to answer:

“Real production problem ko AI se kaise solve karoge?”

Not:

- ✗ Sirf theory
- ✗ Sirf prompt likhna

☒ Architecture + Trade-offs + Deployment

☒ 2 MUST-HAVE TECH SKILLS (Ground Reality)

☐ (A) GenAI / Agentic AI

☒ Ye aana hi chahiye:

- LangChain (LLMs, tools, RAG)
- LangGraph (StateGraph, loops, conditions)
- ReAct, Plan-Execute, Reflection
- Tool calling
- Prompt engineering

 Interview me question aata hai:

“How do you avoid hallucination?”

☒ Answer:

- RAG

- Guardrails
 - Validation node
 - Temperature control
-

☐ (B) Backend Engineering (VERY IMPORTANT 📌)

MNCs ko **AI engineer nahi, Software Engineer with AI** chahiye.

☑ Expect:

- Node.js / Python APIs
- Auth (JWT / OAuth)
- Async handling
- Error handling
- Logging

👉 Question:

“LLM timeout ho gaya to kya karoge?”

☑ Answer:

- Retry node (LangGraph)
 - Circuit breaker
 - Fallback model
-

☐ (C) Cloud (AWS mostly)

☑ Expect:

- EC2 / ECS / Lambda
- S3
- IAM
- CloudWatch
- API Gateway
- Bedrock OR SageMaker

👉 Question:

“Bedrock vs SageMaker kab?”

✓ Already aapka clear hai ✓

□ (D) Vector Databases (NON-NEGOTIABLE)

✓ At least 1 strongly:

- OpenSearch
- Pinecone
- FAISS
- Weaviate

Expect questions:

- Embeddings kya hoti hain
 - Chunking strategy
 - Similarity search
 - Metadata filtering
-

□ (E) RAG Design (VERY HOT 🌶️)

They don't want:

✗ “PDF upload karo bas”

They want:

✓ Real RAG pipeline:

Ingestion → Cleaning → Chunking
→ Embeddings → Vector DB
→ Retrieval → Re-ranking
→ Prompt → LLM

✓ 3 System Design Expectation (INTERVIEW GOLD)

Example question:

“Design an AI support chatbot for banking”

✓ They expect:

- Architecture diagram (verbally)

- Security
 - Scalability
 - Cost control
 - Human-in-the-loop
-

✓ 4 Deployment & Production Thinking

✓ Expect:

- Docker
- CI/CD (basic)
- Env variables
- Monitoring
- Versioning prompts

🔖 Question:

“Model change karna ho bina downtime ke?”

✓ Answer:

- Blue-Green deployment
 - Versioned endpoints
 - Config-based switching
-

✓ 5 Data & Security (MNCs care A LOT)

✓ Expect:

- PII masking
- Prompt injection protection
- Role-based access
- Audit logs

🔖 Question:

“LLM ko sensitive data kaise dena safe hai?”

✓ Answer:

- Redaction
 - Private endpoints (Bedrock)
 - No prompt logging
-

✓ 6 Communication (VERY UNDERRATED)

✓ MNCs expect:

- Clear explanation
- Non-AI stakeholders ko samjha sako
- Trade-off reasoning

👉 Example:

“Why not fine-tune?”

✓ Answer:

- Cost
 - Maintenance
 - Data freshness
-

✓ 7 Interview Rounds Reality

□ Typical flow:

- 1 Resume discussion
 - 2 Backend + JS/Python
 - 3 GenAI + RAG
 - 4 Agentic AI + LangGraph
 - 5 Cloud + Deployment
 - 6 Managerial (communication)
-

✓ 8 Perfect Interview Intro (YOU CAN USE THIS 🙌)

“I build end-to-end GenAI systems using LangChain and LangGraph with RAG and agentic workflows, deploy them on AWS using Bedrock or SageMaker, and focus on production readiness, scalability, and security.”

✓ Ye line interviewer ko relax kar deti hai 😊

✓ 9 Honest Reality Check (No Sugarcoat)

✗ Sirf prompt engineer → LOW demand

✓ Software Engineer + AI → HIGH demand

✓ Aapka background (Node, React, AWS) = **STRONG ADVANTAGE**

□ Final Checklist (Ratta maar lo 😊)

✓ LangChain

✓ LangGraph

✓ RAG

✓ Vector DB

✓ AWS (Bedrock/SageMaker)

✓ Deployment

✓ System Design

✓ Communication
